Professional Summary

Results-driven Computer Science Engineering student with practical experience in full-stack web development, data annotation for computer vision models, and embedded systems. Proven track record of presenting academic research and deploying responsive database-driven applications. Proficient in C++, Python, JavaScript, and MERN-adjacent workflows, seeking a Software Engineering / Full-Stack Developer Internship.

Key Highlights

- **Core Competencies:** Full-Stack Web Development, Data Structures & Algorithms, Computer Vision Pipelines, Database Architecture.
- **Research & Presentation:** Authored and presented a research paper on healthcare platforms at CONASH AI SUMMIT 2026.
- **Hardware-Software Integration:** Demonstrated background spanning electronic engineering and embedded software development.

Technical Skills

- **Languages:** C++, Python, JavaScript (ES6+), Java (Basics), SQL
- **Web Technologies:** HTML5, CSS3, Responsive Design, RESTful APIs
- **Databases & Developer Tools:** MongoDB, Git, GitHub, Linux/Bash, VS Code
- **Core CS Concepts:** Data Structures & Algorithms (DSA), OOP, Networking Fundamentals, GIS & Remote Sensing

Work Experience

Data Annotator Intern | Roadvision AI — Completed (6 Months)
- Labeled and validated 10,000+ road infrastructure and asset image frames for computer vision model training.
- Maintained a 98.5% accuracy rating across bounding-box labeling tasks, adhering to strict QA criteria.
- Partnered with AI engineers to identify edge-case labeling errors, boosting training dataset reliability by 12%.

Engineering Intern | BSNL — Completed (1 Month)
- Gained hands-on exposure to telecommunication network routing protocols, switching nodes, and transmission media.
- Observed network diagnostic workflows, assisting system technicians in identifying packet loss issues.

Technical Projects

BookMyDoctor – Full-Stack Medical Appointment App — *HTML5, CSS3, JavaScript, MongoDB*
- Built a responsive web portal allowing patients to browse doctor schedules and book real-time appointments.
- Designed a schema-driven MongoDB backend handling persistent records for doctors, patients, and booking slots.
- Abstract accepted and research paper presented at the prestigious CONASH AI SUMMIT 2026.

RFID Automated Attendance Monitoring System — *C++, Microcontroller, RFID Modules*
- Created a real-time attendance verification setup utilizing high-frequency RFID cards and a microcontroller.
- Replaced manual paper logging, reducing administrative overhead by 75% and eliminating proxy attendance.
- Engineered reliable serial data storage to retain entry/exit logs with zero communication latency.

Education

Dr. Shakuntala Misra National Rehabilitation University — Expected 2027
Bachelor of Technology in Computer Science and Engineering — Lucknow, India

Government Polytechnic Barabanki — Completed
Diploma in Electronic Engineering (3-Year Program) — Barabanki, India

Certifications & Achievements

- **CONASH AI SUMMIT 2026:** Certificate of Participation and Research Paper Presentation.
- **Remote Sensing & GIS:** Technical Training Certification.
